

Introducing the Incredible

It's Like Having a Coach on Your Gun!

Take Aim's patented SmartShot® software technology turns your shotgun into an intelligent device. The SmartShot software analyzes your shot to provide immediate feedback on hit and miss accuracy, range & velocity of the clay target, and the motion of the shooter. The corrections needed to make the next shot perfectly aimed are furnished both audibly and visually. ShotTracker supports the shooting sports of skeet, trap, sporting clays and helice (ZZ-Birds).

Key Features

ShotTracker gives instant feedback:

- Audible and visual feedback on your shot pattern placement the clay target
- Details of the corrections needed to make the next shot centered on the clay along with the proper lead needed for that shot
- Range and Crossing velocity of the clay
- Probability of breakage
- Motion of the shot gun barrel prior to trigger pull
- Feedback on how well you matched the speed of the clay
- Panoramic video view of the clay's flight - one second before trigger pull to one-half a second after trigger pull
- Can analyze doubles showing transition from first shot to second shot

Audible and visual analysis provided via ClayTracker Pro App
